OMNINET Business Convention Workshop

Laser technologies in the area of

- Measurement
- Material processing
- Medical devices and Procedures

5th - 7th September 2007

in Aalen / Oberkochen

Germany

Introduction

Experts consider the 21st century as the century of the photon. Optical technologies open the door for significant innovations and so rank among the so-called key technologies of European economy. Laser technologies play an important role in this context, since they have become omnipresent in our lives, for instance in the fields of medicine, research, measure techniques or telecommunications. Without laser techniques, a lot of things we use every day would not exist.

The European Union supports initiatives aimed at forming international project teams which focus on the development of these technologies and so contribute to guaranteeing excellent and sustainable European competitiveness.

For this purpose, the partner organisations of the EU-Project OMNI-NET, to which seven European cluster initiatives from the optical technologies belong, are organising an International Business Convention Workshop, which will take place in Aalen (Germany) from 05.09.07 to 07.09.07 and to which we would like to cordially invite you.

A central part of the event will be the business convention meeting on 6th September 2007 in the area of laser technology. Use the opportunity and get acquainted with European partners in the most important areas of application of laser technologies. Meet high-ranking representatives of world class enterprises coming from the car manufacturing sector, supplier industries, optical and opto-electronic industry, medical and laser industry.

One week after your registration we will send you a list of all participants. During the event, participants have the opportunity to make a short presentation. Present your company or institute either with a poster or brochures, or choose to make a presentation.

Photonics Baden-Württemberg invites us on 07.09.2007 to take part at its annual meeting "Mitglieder treffen Mitglieder" (Members meet Members). Use the opportunity to personally meet members and partners of this network.

The conference language will be English.

On behalf of the OMNI-NET consortium we look forward to meeting you in Aalen.
